General

The turbomolecular pumps from Oerlikon Leybold Vacuum generate a clean high and ultra-high vacuum, are easy to operate and are exceptionally reliable. In connection with a well rated backing pump, pressures below 10^{-10} mbar (0.75×10^{-10} Torr) can be attained.

Oerlikon Leybold Vacuum offers two product lines:

1. TURBOVAC line

Turbomolecular pumps with mechanical rotor suspension

2. TURBOVAC MAG line

Turbomolecular pumps with magnetic rotor suspension

Each of the two product lines contains “classic” turbomolecular pumps as well as turbomolecular pumps with a compound stage.

Oerlikon Leybold Vacuum is one of the world’s leading manufacturer of turbomolecular pumps. Consequently, the TURBOVAC and the TURBOVAC MAG pumps are successfully used in many applications. A list of the most important ones is given in the table “Applications” in the section “General”.

Principle of Operation

The turbomolecular pump is a turbine with blades. By the momentum transfer from the rapidly rotating rotor blades to the gas molecules their initially non-directed thermal motion is changed to a directed motion.

TURBOVAC SL 80 turbomolecular pump with frequency converter for attaching or separate and compound stage

TURBOVAC TW 361 turbomolecular pump with mechanical rotor suspension

TURBOVAC MAG W 1500 CT turbomolecular pump with magnetic rotor suspension and compound stage

Hence, the pumping process in a turbomolecular pump results from the directed motion of the gas molecules from the inlet flange to the fore-vacuum port.

In the **molecular flow range** - i.e. at pressures below 10^{-3} mbar (0.75×10^{-3} Torr) - the mean free path of the gas molecules is larger than the spacing between rotor and stator blades (typically some tenths of a millimeter). Consequently, the molecules collide primarily with the rotor blades with the result that the pumping process is highly efficient.

In the **range of laminar flow**, i.e. at pressures over 10^{-1} mbar (0.75×10^{-1} Torr) the situation is completely different. The effect of the rotor is impaired by the frequent collisions between the molecules. Therefore, a turbomolecular pump is not capable of pumping gases at atmospheric pressure thus necessitating the use of a suitably rated forevacuum pump.

To create the directed motion of the gas molecules, the tips of the rotor blades have to move at high speeds. Hence, a high rotational speed of the rotor is required. In the case of Oerlikon Leybold Vacuum turbomolecular pumps the rotor speeds vary from about 36,000 rpm for the larger rotor diameters (e.g. TURBOVAC 1000 about 20 cm (7.87 in.)) to 72,000 rpm. for small rotor diameters (e.g. TURBOVAC 50 about 6 cm (2.36 in.))

Characteristic Quantities

Pumping speed (volume flow rate), S , [l x s^{-1}]

The pumping speed for a given type of gas depends on the diameter of the rotor and the high vacuum flange, the rotor/stator design, the rotor speed and the molecular weight of the gas. The pumping speed S is a non-linear function of the inlet pressure p_1 :

$$S = S(p_1).$$

Gas throughput, Q , [mbar x l x s^{-1}]

Gas throughput Q is linked to the pumping speed S and the inlet pressure p_1 through the relationship

$$Q = Q(p_1) = p_1 \times S(p_1).$$

The maximum permissible gas throughput Q_{max} is attained at the maximum permissible inlet pressure $p_{1, \text{max}}$:

$$Q_{\text{max}} = Q(p_{1, \text{max}}).$$

Compression, K

For a given type of gas, compression K is defined as the ratio between forevacuum pressure p_{VV} (= pressure on the forevacuum side of the turbomolecular pump) and the highvacuum pressure p_{HV} (= pressure on the highvacuum side of the turbomolecular pump):

$$k = k(p_{\text{VV}}) = p_{\text{VV}} / p_{\text{HV}} \\ = p_{\text{VV}} / p_{\text{HV}}(p_{\text{VV}}).$$

Compression depends very much on the gas throughput: at a given forevacuum pressure, compression increases when the gas throughput is reduced.

Idle compression, K_0

Idle compression K_0 of a turbomolecular pump is defined as the amount of compression of this pump at "Zero" gas throughput. What is problematic about this definition is the fact that the demanded "Zero" throughput can never be implemented in practice (finite leak rate, degassing of sealing components, desorption from wall surfaces). Data on idle compression need therefore to be gained from measurements run at extremely low throughputs.

Idle compression of a pump equipped with metal seals is significantly higher compared to the same pump sealed with O-rings.

Ultimate pressure (base pressure), p_{ult} , [mbar]

The ultimate pressure of a turbomolecular pump is defined as that pressure which is attained in the test chamber 48 hours after a 24 hour degassing period of the measurement system. The ultimate pressure will chiefly depend on the foreline pump used and the type of seal used at the highvacuum flange.

TURBOVAC Product Line

The TURBOVAC pumps are turbo-molecular pumps with mechanical rotor suspension which are used in the pressure range from 10^{-1} mbar (0.75×10^{-1} Torr) to 10^{-10} mbar (0.75×10^{-10} Torr). Pumping speeds for air vary from 35 l x s^{-1} (inlet flange diameter = 40 mm (1.57 in.)) to $1,600 \text{ l x s}^{-1}$ (inlet flange diameter = 250 mm (9.84 in.)).

Through the compact design, the most reliable ceramics ball bearings and the simplicity of operation, this line of pumps is used in all high-vacuum and ultrahigh vacuum areas of application.

In particular the TURBOVAC pumps are very successfully operated in mass spectroscopy applications, gas and liquid chromatographic analysis, CD, DVD and hard disk production, manufacturing of large-surface optical layers, and non-corrosive semiconductor fabrication processes.

The most important advantages of the TURBOVAC product line are:

- Oil-free pumps for the generation of clean high and ultra-high vacuum conditions
- Highly performance in any orientation
- Highly degree of operating reliability
- Easy to operate
- Compact design

Ceramic Ball Bearings Technology

All TURBOVAC pumps are fitted with **ceramic ball bearings**, i.e. **ceramic balls** are running in steel races. The bearings are **lubricated for life by grease**.

Ceramic balls are lighter, harder and smoother than balls made of steel. Therefore, with ceramic balls the wear on the races is significantly reduced. Consequently, the lifetime of the bearings, and hence the lifetime of the pump, is increased.

The **TURBOVAC pumps** fitted with grease-lubricated ceramic ball bearings **can be mounted in any orientation**.

As the ball bearing is encapsulated, the grease can not enter the highvacuum space, even if the pump is mounted up-side-down.

Flange designations used in this product section

Components supplied with the Turbomolecular Pumps

Highvacuum Flange

KF, ISO-K and ISO-F models

- Accessories need to be ordered separately

ANSI Models

- O-ring included in the delivery

CF Models

- Without gaskets ¹⁾, but with screws ²⁾

Forevacuum Port

- Centering rings, O-rings and clamps for all KF type forevacuum flanges are included.

Purge / vent ports are blanked-off

¹⁾ For CF gaskets, see Product Section C13

²⁾ Only for MAG pumps

TURBOVAC MAG Product Line

The **TURBOVAC MAG pumps** are **turbomolecular pumps with magnetic rotor suspension** which are used in the **pressure range from 10⁻¹ mbar (0.75 x 10⁻¹ Torr) to 10⁻¹⁰ mbar (0.75 x 10⁻¹⁰ Torr)**.

Pumping speeds for air vary from 300 l x s⁻¹ (inlet flange diameter = 100 mm (3.94 in.)) **to 3,200 l x s⁻¹** (inlet flange diameter = 320 mm (12.6 in.)).

The TURBOVAC MAG pumps are mostly installed on semiconductor processing lines like etching, CVD, PVD and ion implantation, i.e. in applications where corrosive gases need to be pumped. Also electron beam microscopy is an important area of application for these pumps.

The **most important advantages of the TURBOVAC MAG product line** are:

- Hydrocarbon-free pumps for the generation of clean high and ultra-high vacuum conditions
- High performance in any orientation
- High degree of operating reliability
- Extremely low vibration
- Designed for pumping of corrosive gases
- Almost maintenance-free

Use of Turbomolecular Pumps in Analytical Instruments

All modern analytical methods for gas, liquid and plasma analysis – like for example GC-MS, LC-MS and ICP-MS – rely on mass spectrometers and for this reason require adequate highvacuum conditions. Also in electron microscopes and many surface analysis instruments the production of a highvacuum is essential.

In over 90% of all highvacuum applications, the turbomolecular pump has been found to be ideal. Thanks to the hydrocarbon-free vacuum, most simple operation, compact design and almost maintenance-free operation it has in most cases displaced above all the diffusion pump.

On the basis of decades of experience and in cooperation with research facilities and the manufacturers of analytical instruments,

Oerlikon Leybold Vacuum has continually optimized its products.

Through the TURBOVAC wide range series, a further improvement has been attained, making available to users in the area of analytical engineering highly flexible and reliable products.

Owing to the modular concept the user may

- adapt his vacuum system precisely to his requirements
- perfectly integrate the components within his system and
- find the most cost-effective system configuration for his needs.

Moreover, in response to special customer requirements, though Oerlikon Leybold Vacuum has, through the introduction of the TURBOVAC multi inlet series, achieved a major step ahead for analytical instruments.

Up to three analysis chambers can be pumped down simultaneously by a single multi inlet pump. These pumps are fine tuned with regard to pumping speed and gas throughput so as to attain higher detection sensitivities for analytical systems, a smaller footprint and an increased sample throughput.

The benefits for the customers are the extreme compactness of the vacuum systems without sacrificing performance density, simple installation, stable vacuum connections and, compared to the use of discrete individual pumps, significantly lower investment costs for the entire system. The cartridge solution, moreover, allows for an innovative and cost-effective design of the customer's system and during servicing a simple replacement of the active unit without involved assembly work and leak searching.

Cartridge benefits, which convince

- Higher effective pumping speed
- No losses in conductance
- Compact vacuum system
- Easy pump replacement without having to disassemble the highly sensitive mass spectrometer chambers

The benefits for the customers using Oerlikon Leybold Vacuum products are reflected by the efficiency of the analytical instruments:

- Increase in detection sensitivity
- Smaller analytical systems
- Increase in sample throughput
- Reduction of system costs
- Lower maintenance costs

In combination with backing pumps like the TRIVAC or Scroll pump, Oerlikon Leybold Vacuum is able to offer the best vacuum system optimized for all major applications in the area of analytical instrumentation.

Use of Turbomolecular Pumps in the Area of Semiconductor Processes

In the semiconductor industry turbomolecular pumps are used on the following processes, among others:

- Etching
- Sputtering
- Ion implantation
- CVD
- Lithography.

In these applications pumping of aggressive gases is often required.

This may necessitate the use of pumps equipped with a purge gas facility or a magnetic suspension in order to avoid damaged bearings. Especially during metal etching, deposits may occur in the fore-vacuum space of the turbomolecular pump. In order to prevent this the pumps must be heated to a certain temperature. Such temperature controlled variants are optionally available for the MAG 1500 C, MAG 2000 C, MAG 2800 and MAG 3200. In contrast to turbomolecular pumps with mechanical bearings, magnetically levitated pumps provide the advantage that they prevent overheating of the bearings at high gas flows and effectively exclude any damage to the magnetic bearings by aggressive media.

In electron microscopes and in lithographic equipment, low vibration levels are exceptionally important. For this reason magnetically levitated turbomolecular pumps should be used here.

The recommended backing pumps are either dry compressing ECODRY pumps or rotary vane pumps from the TRIVAC range, possibly fitted with the BCS system.

Use of Turbomolecular Pumps in the Area of Coating Systems

Coating of optical and magnetic storage media, optical components as well as architectural glass requires highvacuum conditions. This is the only way to ensure that the formed layers will be uniform and adhere to the substrate.

The way in which the vacuum is generated has a significant impact on the quality of the coating. By pumping the vacuum chamber down to pressures in the range of 10^{-6} mbar (0.75×10^{-6} Torr), interfering gas and water molecules are removed from the processing chamber. In the case of sputtering the coating process is run in the pressure range between 10^{-3} and 10^{-2} mbar (0.75×10^{-3} and 0.75×10^{-2} Torr), and in the case of evaporation coating, pressures below 10^{-4} mbar (0.75×10^{-4} Torr) are utilized.

The turbomolecular pump meets all requirements of the customers as to a hydrocarbon-free vacuum, very simple operation, compact design and almost maintenance-free operation in an almost ideal manner. The range of pumps from Oerlikon Leybold Vacuum includes pumps with flange diameters ranging from 40 mm to 250 mm (1.57 in. to 9.84 in.) nominal width. Thus the right pump is available for each application, be it coating of data memories (CD, DVD, hard discs), coating of tools and coating of precision lenses in the area of optical components, displays or architectural glass.

Entire high vacuum equipment of a CD/DVD coating system with TURBOVAC TW 250 S pumps

Research and Development

In the area of research, all types of turbomolecular pumps from Oerlikon Leybold Vacuum are being used.

In the case of particularly stringent requirements such as low vibration levels, a TURBOVAC with magnetic bearings should be selected; the same applies to those applications in which entirely hydrocarbon-free pump systems are required.

Nuclear fusion technology

High performance glass coating plant

TURBOVAC MAG W 1300 C turbomolecular pump with magnetic rotor suspension and compound stage

Magnetic Bearings Technology

The world-wide success of the TURBOVAC MAG product line results from more than **30 years of experience** of Oerlikon Leybold Vacuum in the development and manufacturing of turbomolecular pumps with magnetically levitated rotors.

In 1976 Oerlikon Leybold Vacuum started the market introduction of the famous TURBOVAC 560 M. This was the first magnetically levitated turbomolecular pump which became commercially available. Today, Oerlikon Leybold Vacuum is employing the well-proven and reliable 5 axes active suspension design principle.

Five axes with active bearings

The rotor position is actively controlled by electromagnets in all 5 degrees of freedom. The TURBOVAC MAG 300/400, MAG 600/700, MAG 830/1300, MAG 1500, MAG 2000, MAG 2200 and MAG 2800/3200 are equipped with such a bearing system.

Products and Accessories

Mechanical Rotor Suspension without Compound-Stage

TURBOVAC 50

Typical Applications

- Leak detectors
- Mass spectrometers
- Electron beam microscopy
- TV tube manufacturing
- Load locks and transfer chambers
- High vacuum chambers

Dimensional drawing for the TURBOVAC 50

Technical Features

- Small footprint
- Installation in any orientation
- Cooling by convection is sufficient for most applications
- Air and water cooling can be added easily
- Oil-free pump for generating clean high and ultrahigh vacuum conditions

Pumping speed as a function of the inlet pressure (TURBOVAC 50 with flange DN 63 ISO-K)

Advantages to the User

- Space-saving
- Easy to integrate into complex vacuum systems
- Low operating costs
- Highly reliable operation also in processes loaded with particles

Mechanical Rotor Suspension without Compound-Stage

TURBOVAC 151, 151 C ClassicLine

Turbomolecular pumps without a purge gas facility are only suited for pumping of air or inert gases. They are not suited for pumping of aggressive or reactive gases.

TURBOVAC pumps with a "C" in the type designation are equipped with a purge gas facility. The purge gas protects only the bearing area and the motor of the TURBOVAC.

Dimensional drawing for the TURBOVAC 151 and 151 C

Pumping speed as a function of the inlet pressure (TURBOVAC 151 with flange DN 100)

Typical Applications

Mechanical Rotor Suspension without Compound-Stage

TURBOVAC 361, 361 C ClassicLine

Turbomolecular pumps without a purge gas facility are only suited for pumping of air or inert gases. They are not suited for pumping of aggressive or reactive gases.

TURBOVAC pumps with a "C" in the type designation are equipped with a purge gas facility.

The purge gas protects only the bearing area and the motor of the TURBOVAC.

Dimensional drawing for the TURBOVAC 361 and 361 C

Typical Applications

- Leak detectors
- Mass spectrometers
- Data storage
- Optical coating
- R & D
- UHV systems
- Particle accelerators
- Load locks and transfer chambers

Technical Features

- Small footprint
- Installation in any orientation
- Oil-free pump for generating clean high and ultrahigh vacuum conditions
- Bearing temperature measurement through the TURBO.DRIVE TD 20 classic

Advantages to the User

- Space-saving
- Easy to integrate into complex vacuum systems
- Low operating costs
- Highly reliable operation also in processes loaded with particles

Mechanical Rotor Suspension without Compound-Stage

TURBOVAC 1100 C ClassicLine

Typical Applications

- Data storage
- Flat panel displays
- Optical coating
- Large area coating
- Load locks and transfer chambers

Dimensional drawing for the TURBOVAC 1100 C

Technical Features

- Robust rotor design
- Installation in any orientation
- Highest pumping speed and highest throughput
- Bearing temperature measurement through the TURBO.DRIVE TD 20 classic
- Oil-free pump for generating clean high and ultrahigh vacuum conditions
- Seal gas connection
- Venting connection

Advantages to the User

- Space-saving
- Easy to integrate into complex vacuum systems
- High productivity
- Low operating costs
- Highly reliable operation also in processes loaded with particles

Mechanical Rotor Suspension with integrated Frequency Converter and Power Supply, without Compound-Stage TURBOVAC T 1600 / T 1601

Typical Applications

- Data storage
- Flat panel displays
- Optical coating
- Large area coating
- R & D
 - Thermonuclear fusion experiments
 - Space simulation

Dimensional drawing for the TURBOVAC T 1600

Technical Features

- Frequency converter and power supply integrated
- Robust rotor design
- Operation in any orientation
- Highest pumping speed and highest throughput
- Oil-free pump for generating clean high and ultrahigh vacuum conditions
- Purge gas and venting valve integrated
- For special outside influences
 - tropical proof moisture resistant (only T 1601)

Advantages to the User

- Space-saving
- Easy to integrate into complex vacuum systems
- High productivity
- Low operating costs
- Highly reliable operation also in processes loaded with particles

Mechanical Rotor Suspension with Frequency Converter for Attaching or Separate with Compound Stage

TURBOVAC SL 80

Typical Applications

- Helium leak detectors
- Mass spectrometers (gas chromatography GC-MS), liquid chromatography (LC-MS), residual gas analysis, mobile analytical systems, etc.)
- Electron beam microscopy
- XHV-/UHV systems
- Transfer chambers

Dimensional drawing for the TURBOVAC SL 80: Attachment examples

Technical Features

- Oil free pump
- High pressure foreline tolerance
- Excellent resistance to vibration due to proven mechanical bearings
- Efficient convection cooling due to a large number of cooling fins
- Purge gas/venting connection
- Installation in any orientation
- Flexible attachment of the frequency converter to the pump
- Small footprint
- Delayed venting through the frequency converter TURBO.DRIVE TD 400 (optional)
- Selection of interfaces, RS 232 C, RS 485 C, Profibus

Pumping speed as a function of the inlet pressure

Advantages to the User

- Easy to integrate into complex vacuum systems
- Space-saving
- Prepared for pumping of slightly corrosive gases owing to the seal gas connection
- High reliability, MTTF over 200,000 hours
- Matching accessories (fan, water cooling, seal gas/venting valves, power failure venting valves, flange heaters, different cable lengths etc.)
- High reliability due to self-monitoring

Mechanical Rotor Suspension with Frequency Converter for Attaching or Separate with Compound Stage

TURBOVAC SL 300

Typical Applications

- Particle accelerators
- Mass spectrometers (gas chromatography GC-MS), liquid chromatography (LC-MS), time of flight (TOF-MS), residual gas analysis, etc.)
- Electron beam microscopy
- Coating technology
- XHV-/UHV systems
- Transfer chambers

Dimensional drawing for the TURBOVAC SL 300

Technical Features

- Oil free pump
- High pressure foreline tolerance
- Excellent resistance to vibration due to proven mechanical bearings
- Efficient convection cooling due to a large number of cooling fins
- Purge gas/venting connection
- Installation in any orientation
- Flexible attachment of the frequency converter to the pump
- Small footprint
- Delayed venting through the frequency converter TURBO.DRIVE TD 400 (optional)
- Selection of interfaces, RS 232 C, RS 485 C, Profibus

Pumping speed as a function of the inlet pressure

Advantages to the User

- Easy to integrate into complex vacuum systems
- Space-saving
- Prepared for pumping of slightly corrosive gases owing to the seal gas connection
- High reliability, MTTF over 200,000 hours
- Matching accessories (fan, water cooling, seal gas/venting valves, power failure venting valves, flange heaters, different cable lengths etc.)
- High reliability due to self-monitoring

Mechanical Rotor Suspension without integrated Frequency Converter with Compound Stage

TURBOVAC TW 250 S

Typical Applications

- Analytical Instruments
- Coating
- R & D
- Transfer chambers

Technical Features

- High gas throughput
- Oil free pump
- Insensitive to impact and movement due to the mechanical bearing concept- Installation in any orientation
- Small footprint
- Integrated fan
- Purge gas/venting connection

Dimensional drawing for the TURBOVAC TW 250 S without frequency converter

Operation diagram for nitrogen for TURBOVAC TW 250 S

Advantages to the User

- Highest throughput for N₂ and Ar
- Highest reliability in operation
- Space-saving
- High reliability due to self-monitoring
- Easy to integrate into complex vacuum systems

Mechanical Rotor Suspension with Compound Stage

TURBOVAC TW 501

Typical Applications

- R & D
- Thermonuclear fusion
- Space simulation
- Data memories
- Coating

Technical Features

- Robust rotor design
- High pressure foreline tolerance
- Oil-free pump for generating clean high vacuum conditions
- Installation in any orientation
- Seal gas/venting connection (purge/vent)
- Water and air cooling
- CE and NRTL compliant
- RS 232 C interface
- Electronic frequency converter TD 35 with integrated power supply and display for controlling and monitoring the pump

Dimensional drawing for the TURBOVAC TW 501

Advantages to the User

- Compact, space saving design
- High gas throughput
- Extremely rugged and maintenance-free

Mechanical Rotor Suspension with integrated Frequency Converter und Netzteil with Compound Stage

TURBOVAC TW 1600

Typical Applications

- Data storage
- Flat panel displays
- Optical coating
- Glas-Beschichtung
- R & D
 - Fusion experiments
 - Space simulation
 - UHV applications

Dimensional drawing for the TURBOVAC T 1600

Technical Features

- Frequency converter and power supply integrated
- Robust rotor design
- Operation in any orientation
- Highest pumping speed and high throughput
- Oil-free pump for generating clean high and ultrahigh vacuum conditions
- Integrated seal gas and venting valve
- High pressure foreline tolerance

Pumping speed as a function of the inlet pressure (TURBOVAC T 1600 with flange DN 250)

Advantages to the User

- Space-saving
- Easy to integrate into complex vacuum systems
- High productivity
- Low operating costs
- Operation with dry compressing backing pumps

Inlet screen, centering ring with FPM sealing ring, outer ring	ISO-F

Special Turbomolecular Pumps

TURBOVAC Multi Inlet

Application example: GC-MS

Multi inlet product examples
Left: cartridge, right: dual inlet

Advantages to the User

- Reduction of system costs
- Smaller size of the analysis system
- Reduction in the number of individual vacuum components
- Choice between cartridge or customised pump housing

Typical Applications

For example

- LC-MS (linking of a liquid chromatograph to a mass spectrometer)
- GC/MS (linking of a gas chromatograph to a mass spectrometer)
- TOF-MS (time-of-flight mass spectrometer)
- ICP-MS (inductively coupled plasma mass spectrometry)
- Helium leak detectors

Technical Features

- Dual Inlet (pumping down of two analysis chambers)
- Triple inlet (pumping down of three analysis chambers)
- High effective pumping speed

HV stage S = 60 to 400 l/s

Interstage IS1 S = 30 to 300 l/s

Interstage IS2 S = 5 to 30 l/s

- Cartridge solutions (without pump housing) are available
- Compact vacuum system

Customised versions are available upon request

Magnetic Rotor Suspension with integrated Frequency Converter, with Compound Stage

TURBOVAC MAG W 300/400 iP

Typical Applications

- Gas analysis systems
- Particle accelerators
- Electron microscopes
- Research
- Coating systems

Technical Features

- Installation in any orientation
- DN 100 or 160 ISO-K and/or CF high vacuum connection
- DN 16 KF with clamped forevacuum connection
- Purge gas/venting connection DN 16 KF with clamped connection (purge/vent)
- Water or air cooling optional
- CE and RoHS compliant; fulfilment of UL requirements
- 2 slots for industrial communications modules
- Standard 9 pin 24 V SPS PLC-IO in Control Slot
- RS 232 C in Service Slot
- further interfaces can be fitted: Ethernet, Profibus, DeviceNet, RS 485 C

Dimensional drawing for the TURBOVAC MAG W 300/400 iP

Pumping speed for N_2 of the TURBOVAC MAG W 300/400 iP as a function of the inlet pressure

Advantages to the User

- Highest pumping speed from the smallest possible size
- New standard regarding maintenance free systems
- Suitability for vibration sensitive applications in the area of analytical engineering, thin-film technology, electron microscopes, research, development among others
- Flexibility due to the modular concept; the converter is optionally also available by way of a bench top unit

Magnetic Rotor Suspension with integrated Frequency Converter, with Compound Stage

TURBOVAC MAG W 600/700 iP

Typical Applications

- Gas analysis systems
- Particle accelerators
- Electron microscopes
- Research
- Coating systems

Technical Features

- Installation in any orientation
- DN 160 or 200 ISO-K and/or CF high vacuum connection
- DN 25 KF with clamped forevacuum connection
- Purge gas/venting connection DN 16 KF with clamped connection (purge/vent)
- Water or air cooling optional
- CE and RoHS compliant; fulfilment of UL requirements
- 2 slots for industrial communications modules
 - Standard 9 pin 24 V SPS PLC-IO in Control Slot
 - RS 232 C in Service Slot
 - further interfaces can be fitted: Ethernet, Profibus, DeviceNet, RS 485 C

Dimensional drawing for the TURBOVAC MAG W 600/700 iP

Pumping speed for N_2 of the TURBOVAC MAG W 600/700 iP as a function of the inlet pressure

Advantages to the User

- Highest pumping speed from the smallest possible size
- New standard regarding maintenance free systems
- Suitability for vibration sensitive applications in the area of analytical engineering, thin-film technology, electron microscopes, research, development among others
- Flexibility due to the modular concept; the converter is optionally also available by way of a bench top unit

Magnetic Rotor Suspension with separate Frequency Converter, without Compound-Stage

TURBOVAC MAG 1500 CT

Typical Applications

- All major semiconductor processes such as Etch, CVD, PVD and Ion Implantation
- Load lock and transfer chambers

Technical Features

- Active 5-axis magnetic bearing system
- Patented KEPLA-COAT® for rotor and stator to prevent corrosion
- Low noise and vibration levels
- Installation in any orientation
- Advanced rotor design for high throughput
- Integrated purge gas system
- Integrated temperature management system (TMS)
- Bearing and temperature system are controlled digitally
- Intelligent power control system

Dimensional drawing for the TURBOVAC MAG 1500 CT

Advantages to the User

- Maintenance-free
- High throughput for all process gases
- High pumping speed at low pressure
- High foreline pressure tolerance: up to 1.7 mbar (1.3 Torr)
- High resistance against corrosive gases
- Robust against particles and deposits
- Temperature control up to 90 °C (194 °F) to avoid condensation
- Lowest weight and size in its class
- Application specific design

Magnetic Rotor Suspension with separate Frequency Converter, with Compound Stage

TURBOVAC MAG W 600/700 P

Typical Applications

- Gas analysis systems
- Particle accelerators
- Electron microscopes
- Research
- Coating systems

Technical Features

- Installation in any orientation
- DN 160 or 200 ISO-K and/or CF high vacuum connection
- DN 25 KF with clamped forevacuum connection
- Purge gas/venting connection DN 16 KF with clamped connection (purge/vent)
- Water or air cooling optional
- CE and RoHS compliant; fulfilment of UL requirements

Dimensional drawing for the TURBOVAC MAG W 600/700 P

Pumping speed for N₂ of the TURBOVAC MAG W 600/700 P as a function of the inlet pressure

Advantages to the User

- Highest pumping speed from the smallest possible size
- New standard regarding maintenance free systems
- Suitability for vibration sensitive applications in the area of analytical engineering, thin-film technology, electron microscopes, research, development among others
- Flexibility due to the modular concept; alternatively the pump is available also with an integrated frequency converter

Magnetic Rotor Suspension with separate Frequency Converter, with Compound Stage

TURBOVAC MAG W 830/1300 C

Typical Applications

- Semiconductor processes, like PVD and ion implantation
- Transfer chambers
- Particle accelerators
- Research
- Coating systems

Dimensional drawing for the TURBOVAC MAG W 830/1300 C

Technical Features

- Active 5-axis magnetic bearing system
- Digital monitoring of the bearing system
- Low noise and vibration levels
- Installation in any orientation
- Advanced rotor design for high throughput
- Purge gas connection
- Intelligent power control system

Advantages to the User

- Maintenance-free
- High throughput for all process gases
- High pumping speed at low pressure
- High foreline pressure tolerance: up to 2 mbar (1.5 Torr)
- Lowest weight and size in its class
- Application specific design

Magnetic Rotor Suspension with separate Frequency Converter, with Compound Stage

TURBOVAC MAG W 1500 CT

Typical Applications

- All major semiconductor processes such as Etch, CVD, PVD and Ion Implantation

Technical Features

- Active 5-axis magnetic bearing system
- Bearing and temperature system are controlled digitally
- Corrosion resistant
- Low noise and vibration levels
- Installation in any orientation
- Advanced rotor design for high pump speeds and forevacuum pressures
- Integrated purge gas system
- Integrated temperature management system (TMS)
- Intelligent power control system

Pumping speed of the TURBOVAC MAG W 1500 CT (DN 250) as a function of the inlet pressure

Magnetic Rotor Suspension with separate Frequency Converter with Compound Stage

TURBOVAC MAG W 2000 C/CT

Typical Applications

- All major semiconductor processes such as Etch, CVD, PVD and Ion Implantation

Technical Features

- Active 5-axis magnetic bearing system
- Patented KEPLA-COAT® for rotor and stator to prevent corrosion
- Low noise and vibration levels
- Installation in any orientation
- Advanced rotor design for high pump speeds and forevacuum pressures
- Integrated purge gas system
- CT versions: Integrated temperature management system (TMS)

Dimensional drawing for the TURBOVAC MAG W 2000 C/CT

Advantages to the User

- Maintenance-free
- High throughput for all etch gases
- High pumping speed at low pressure
- High foreline pressure tolerance: up to 5.3 mbar (4 Torr)
- High resistance against corrosive gases
- Robust against particles and deposits
- Temperature management system (TMS) to avoid condensation
- Application specific design

Accessories

Electronic Frequency Converters for Pumps with Mechanical Rotor Suspension

TURBO.DRIVE TD 20 *classic*

Technical Features

- For operating the TURBOVAC 151 (C), 361 (C), 600 C, 1000 C and 1100 C turbomolecular pump
- Front panel with LED
 - Status, Power, Error, pump run-up, pumping power
- Wide voltage range mains input
- Current interfaces like Profibus, DeviceNet, Ethernet/IP, RS 232 C, RS 485 C and 25-way terminal strip, available as options

Advantages to the User

- Easy integration within a vacuum system owing to the large variety of different modern interfaces as well as for modernising older systems
- Start/stop function through keys on the front panel
- Remote control and process control through analog and PLC compatible inputs and outputs
- Compatible to frequency converter NT 20, NT 151/361 and NT 361

TURBO.DRIVE TD 400 (Front side)

Dimensional drawing for the TURBO.DRIVE TD 400 (Rear side)

Technical Features

- Small footprint
- RS 232 C, RS 485 C, Profibus or Ethernet/IP interface
- Configurations:
 - as a separate frequency converter
 - integrated within the turbomolecular pump
- Remote control via remote interface
- Flexible mounting options
- Cost-effective supply of 24 V DC

Electronic Frequency Converters for Pumps with Magnetic Rotor Suspension MAG.DRIVE S

MAG.DRIVE S without display

MAG.DRIVE S with display

Advantages to the User

- Operation of turbomolecular pumps with magnetically levitated rotors:
 - MAG W 300/400 P and
 - MAG W 600/700 P
- Easy operation through the controls
- Communication to host computer of the customer via serial interface and conventional interface possible
- Setting of speed and other functions
- Warning in case the pump is running out of specification
- Storing of all parameters in the pump's memory
- Small size and low weight
- Integrated fan
- 2 slots for industrial communications modules
 - rear side:
 - Standard 9 pin 24 V SPS
 - PLC-IO in Control Slot
 - front side:
 - RS 232 C in Service Slot
 - further interfaces can be fitted:
 - Ethernet, Profibus, DeviceNet,
 - RS 485 C

Technical Data		Power Failure Venting Valve
Drive voltage	V DC	24
Power consumption	W	4
Connecting flange	DN	16 KF
Weight, approx.	kg (lbs)	0.3 (0.66)

Ordering Information

Power failure venting valve, normally open

Power Failure Venting Valve

Part No. 800120V0021

Power Failure Venting Valve, Electromagnetically Actuated

Technical Data

Technical data

Power Failure Venting Valve

See Catalog Section C14 "Valves", para. "Special Valves"

Ordering Information

Power failure venting valve DN 10 KF,
electromagnetically actuated
24 V DC
230 V AC / 50/60 Hz

Power Failure Venting Valve

Part No. 174 46
Part No. 174 26

Purge Gas and Venting Valve

Technical Data

Connecting flange DN
Weight, approx. kg (lbs)

Purge Gas and Venting Valve

10 KF
0.7 (1.55)

Ordering Information

Purge gas and venting valve, 230 V
0.2 mbar x l x s⁻¹ (12 sccm)
0.4 mbar x l x s⁻¹ (24 sccm)

Purge Gas and Venting Valve

Part No. 855 19
Part No. 855 29

Purge Gas and Venting Valve

Technical Data

Connecting flange
Inlet
Outlet
Purge gas pressure, abs. bar
Weight, approx. kg (lbs)

Purge Gas and Venting Valve

1/4" tube
pump specific or DN 16 KF

1.5 to 6,0
0.5 (1.1)

Ordering Information

Purge gas and venting valve
24 V DC; 0.6 mbar x l x s⁻¹

Purge Gas and Venting Valve

Part No. 121 33

Further 0.6 mbar x l x s⁻¹ valves upon request

Purge Gas and Venting Valve for ClassicLine and SL Pumps

Technical Data

Connecting flange		
Pump side	DN	10 KF
Gas connection	G	1/4"
Seal gas pressure, abs.	bar	1
Weight, approx.	kg (lbs)	0.3 (0.66)

Purge Gas and Venting Valve

Ordering Information

Purge gas and venting valve at 1 bar
 0.2 mbar x l x s⁻¹ (12 sccm), 24 V DC
 0.2 mbar x l x s⁻¹ (12 sccm), 110 - 115 V DC
 0.2 mbar x l x s⁻¹ (12 sccm), 230 V DC
 0.4 mbar x l x s⁻¹ (24 sccm), 24 V DC
 0.4 mbar x l x s⁻¹ (24 sccm), 110 - 115 V DC
 0.4 mbar x l x s⁻¹ (24 sccm), 230 V DC
 0.6 mbar x l x s⁻¹ (36 sccm), 24 V DC
 0.6 mbar x l x s⁻¹ (36 sccm), 110 - 115 V DC
 0.6 mbar x l x s⁻¹ (36 sccm), 230 V DC

Purge Gas and Venting Valve

Part No. 113 50
Part No. 800152V0041
Part No. 800152V0019
Part No. 800152V0013
Part No. 800152V0042
Part No. 800152V0014
Part No. 800152V0012
Part No. 800152V0043
Part No. 800152V0040

Adapter Set for Seal Gas and Venting Valve for the SL pumps

Technical Data

Pump flange adapter M8/DN 10 KF including adapter centering ring DN 10/DN 16 KF with sinter filter insert and clamping ring

Adapter Set

Ordering Information

Adapter set for purge gas and venting valve

Adapter Set

Part No. 800110V0011

Gas Filter to G 1/4" for Purge Gas and Venting Valve

Technical Data

Gasfilter including fitting G 1/4-in. and 2 gaskets

Gas Filter

Ordering Information

Gas filter to G 1/4-in. for seal gas and venting valve

Gas Filter

Part No. 800110V0012

Replacement filter for gas filter to G 1/4-in. for seal gas and venting valve

Part No. 200 18 515

The following accessories are also available:

Delayed venting unit
 Part No. 500 441
 (see Product Section C10)

Accessories for Serial Interfaces RS 232 C and RS 485 C

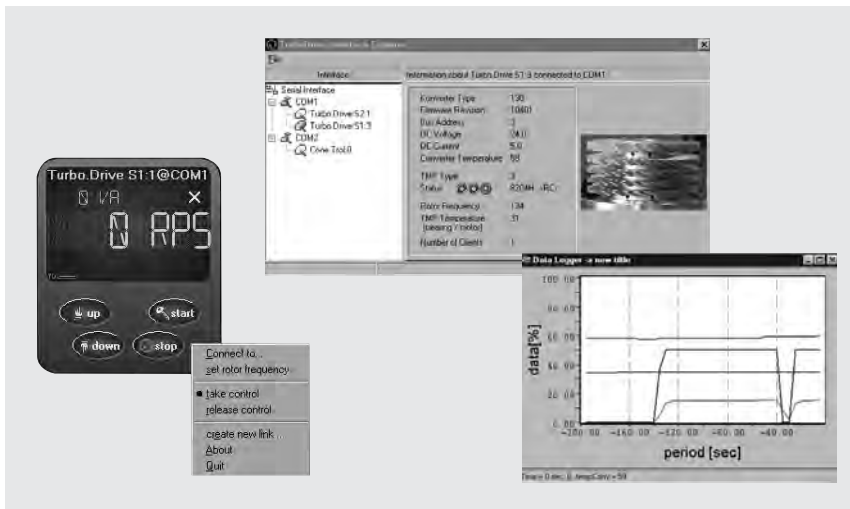

Through these accessories many control, monitoring and information capabilities can be implemented in connection with the electronic frequency converters and turbomolecular pumps.

The following turbomolecular pumps or electronic frequency converters are supported:

TW 70 H / TURBO.DRIVE S
SL 80, SL 300 /
TURBO.DRIVE TD 400
SL 700 / TURBO.DRIVE TD 700

TW 250 S / TURBO.DRIVE S /
TURBO.DRIVE TD 300
TW 300, TW 300 H / TURBO.DRIVE S /
TURBO.DRIVE TD 300
TW 501
TW 701
T 1600, TW 1600
TW 2401

PC Software

PC software for Windows 95 or higher

Technical Features

- Convenient graphical user interface
- Several turbomolecular pumps can be operated in parallel
- Display, modify, save and compare the parameter lists of the turbomolecular pumps
- Integration of customer's software
- Recording parameter data over time (for example, temperatures, rotor frequency)

Ordering Information

PC Software

PC software
"TURBO.DRIVE Server", CD-Rom ¹⁾

Part No. 800110V0102 ¹⁾

¹⁾ The PC software can be downloaded from "www.oerlikon.com"
Software supports only RS 232 C, RS 485 C and Profibus

Adaptor RS 232 C/RS 485 C for Frequency Converter with RS 485 C Interface

Ordering Information

Adaptor RS 232 C/RS 485 C

Adaptor RS 232 C/RS 485 C
Mains connection 220 V, 50 Hz, EURO plug

Part No. 800110V0101

Services for Mechanically Suspended Turbomolecular Pumps

Complete Refurbishing at the Service Centre

Complete refurbishing at the service centre includes the following:

Complete disassembly, cleaning, replacement of all wearing parts, mounting, electrical safety test, final test including vibration measurement

Complete Refurbishing with Decontamination at the Service Centre

Complete refurbishing with decontamination at the service centre includes the following:

Complete disassembly, cleaning and decontamination, replacement of all wearing parts, mounting, electrical safety test, final test including vibration measurement
