Preface

This manual provides the information you need to successfully perform tip seal replacement on your Vacuum Technologies TriScroll™ Dry Vacuum Pump. Tip seal replacement is generally recommended when the pump base pressure has risen to an unacceptably high level for your application. If you have questions that are not addressed in this manual, please contact the nearest Vacuum Technologies service facility listed on the rear cover of this manual.

Safety Considerations

READ THE FOLLOWING INSTRUCTIONS. TAKE ALL NECESSARY PRECAUTIONS.

The following format is used in this manual to call attention to hazards:

WARNING *The warning messages are for attracting the attention of the operator to a particular procedure or practice which, if not followed correctly, could lead to serious injury.*

CAUTION *The caution messages are displayed before procedures, which if not followed, could cause damage to the equipment.*

NOTE *The notes contain important information taken from the text.*

Maintenance personnel must be aware of all hazards associated with this equipment. They must know how to recognize hazardous and potentially hazardous conditions, and know how to avoid them. The consequences of work performed by unskilled or improperly trained maintenance personnel, or careless operation of the equipment employed in the specified maintenance procedures can be serious. Every maintenance person must read and thoroughly understand the materials discussed and the instructions provided in this manual, as well as any additional information provided by Vacuum Technologies.

TriScroll 600 Dry Scroll Vacuum Pump

All warnings and cautions must be read carefully, fully understood, and strictly observed. Consult local, state/province, and national agencies regarding specific requirements and regulations. Address any safety, operation, and/or maintenance questions to the nearest Vacuum Technologies location.

WARNING

Disconnect power from the TriScroll 600 before performing any maintenance procedure.

Allow the pump to cool before performing any maintenance procedure. Approximate cool-down time is one to two hours.

CAUTION

Wipe all O-rings clean with a lint-free cloth before installation to ensure that no foreign matter is present to impair the seal.

Do not use alcohol, methanol or other solvents on O-rings. To do so causes deterioration and reduces their ability to hold a vacuum.

If applicable, apply a small amount of Krytox[®] GPL 224 grease and wipe the O-rings “shiny” dry.

NOTE

Vacuum Technologies recommends replacing all O-rings during routine maintenance or during any maintenance procedure requiring that O-rings be removed.

WARNING

The TriScroll 600 weighs 32 kg (70 lbs). To avoid injury, use proper lifting techniques when moving the pump.

TriScroll 600 Dry Scroll Vacuum Pump

Related TriScroll Manuals

Manuals related to the installation and operation, pump module replacement, and major maintenance for the TriScroll 600 series pumps are listed in the following table:

Title	Applicable TriScroll Model	Part Number
Major Maintenance Manual	All TriScroll 600 Series Models	699904300
Pump Module Replacement	All TriScroll 600 Series Models	699904305
Installation and Operation Manual	All TriScroll 600 Series Models	699904290

Maintenance and Tool Kits

Material and tooling required to perform maintenance on TriScroll pumps is provided in kit form. A description of each kit and ordering information is provided in the following table:

Description	Contents	Applicable TriScroll Model	Part Number
Major Maintenance Tool Kit	All bearings, bearing seals, bearing lubricant, O-rings, and tip seals required to rebuild TriScroll 600 Series pumps.	All TriScroll 600 Series models	PTSS0600MK
Maintenance Tool Kit	All fixtures and tools required to perform any maintenance on TriScroll 600 Series pumps.	All TriScroll 600 Series models	PTSS0600TK
Tip Seal Tool Kit	All tools required to change the tip seals on any TriScroll Series pump.	All TriScroll Series pumps	PTSTSTKIT
Replacement Tip Seal Set	Replacement tip seals and static O-rings for TriScroll 600 Series pumps.	All TriScroll 600 Series models	PTSS0600TS

Factory Service Options

Vacuum Technologies offers factory-rebuild service or advance exchange of complete TriScroll Pumps or TriScroll Pump Modules. Contact your nearest Vacuum Technologies sales office for price and availability information. Select your preferred service option from the table below.

Factory Service Options	Part Number
Advance Exchange TriScroll 600 Single Phase	EXPPTS06001
Advance Exchange TriScroll 600 Three Phase	EXPPTS06003
Advance Exchange TriScroll 610 Single Phase	EXPPTS06101
Advance Exchange TriScroll 610 Three Phase	EXPPTS06103
Advance Exchange TriScroll 600 Pump Module Only	EXPTS0600SC
Advance Exchange TriScroll 610 Pump Module Only	EXPTS0610SC
Service/Rebuild TriScroll 600 Pump (Single or Three Phase)	PTS0600KMA
Service/Rebuild TriScroll 610 Pump (Single or Three Phase)	PTS0610KMA
Service/Rebuild TriScroll 600 Pump Module Only	PTS0600SCRP
Service/Rebuild TriScroll 610 Pump Module Only	PTS0610SCRP

Contacting Vacuum Technologies

In the United States, you can contact Vacuum Technologies Customer Service at 1-800-8VARIAN. See the back cover of this manual for a listing of our sales and service offices.

Internet users:

Tip Seal Replacement

General Information

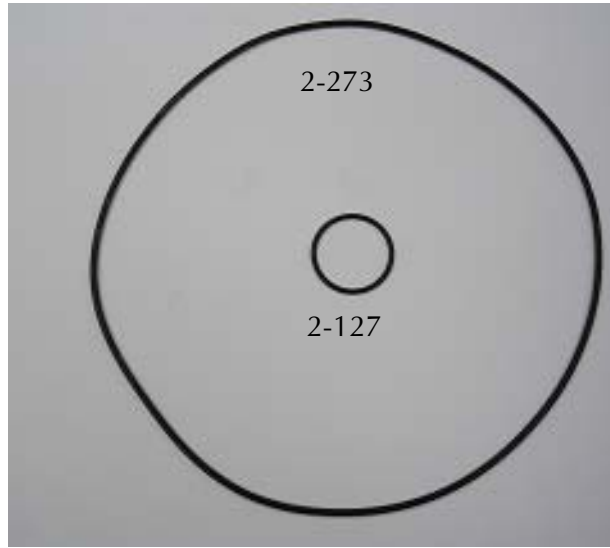

Vacuum Technologies TriScroll 600 series pumps will provide years of trouble-free service if maintenance procedures and intervals are observed. Bearing grease replenishment and tip seal replacement is recommended when the pump base pressure rises to an unacceptably high level for your application. Replace bearings, rotary seals and O-rings if the pump bearings exhibit humming or grinding noises. Main bearing life may be shortened if your application requires the pumping of high quantities of water vapor. Use bearing purge to keep this water from impacting bearing life.

Required Equipment

- ❑ **Tip Seal Replacement Kit:** PTSS0600TS (“Tip Seal Replacement Kit” on page 2)
- ❑ **Tip Seal Tool Kit:** PTSTSTKIT (“Tip Seal Tool Kit” on page 3; customer can supply metric Allen wrench set and chisel).
- ❑ **Vacuum Measuring Gauge:** Capable of measuring pressures of 5 to 20 mTorr with an accuracy of ± 1 mTorr. A capacitance manometer or Pirani gauge is recommended.

Metric Hex Key Set

TriScroll 600 Disassembly

Remove the Intake Fitting

1. Remove the two M5x16 screws from the intake assembly.
2. Remove the intake assembly from the top of the pump.

3. Remove and discard the O-ring from the groove on the underside of the intake fitting.

TriScroll 600 Disassembly (Continued)

Remove the Outboard Housing

1. Remove the three M5x16 screws that attach the cowling to the module.
2. Remove the cowling.

3. Remove the six M6x55 screws that attach the outboard housing to inboard housing.
4. Remove the outboard housing.

TriScroll 600 Disassembly (Continued)

5. Remove and discard the O-ring.

6. Remove and discard the tip seals from the outboard housing.

TriScroll 600 Disassembly (Continued)

Remove the Inboard Housing and Orbiting Plate Assembly

1. Remove the four M5x15 screws that attach the inboard housing to the frame.

2. Remove the inboard housing from the frame.

Locate the rubber spider that mounts between the motor shaft coupling and the inboard housing assembly.

CAUTION

The inboard housing assembly weighs 22 lbs.

TriScroll 600 Disassembly (Continued)

Counterweight

Disassemble the Inboard Housing and the Orbiting Plate Assembly

1. Remove the M8x12 screw and washer that attaches the counterweight to the inboard housing.

2. Lift the counterweight off of the inboard housing.

The counterweight is keyed to the crankshaft. Locate the key after removal of the counterweight from the inboard housing

TriScroll 600 Disassembly (Continued)

3. Remove the inboard housing from the crankshaft and orbiting plate.

4. Remove and discard the tip seals from the inboard housing.

TriScroll 600 Disassembly (Continued)

5. Remove and discard the tip seals from both sides of the orbiting plate.

TriScroll 600 Disassembly (Continued)

Scroll Cleaning

1. Carefully scrape with a chisel to loosen the tip seal dust from the:

- Orbiting plate
- Inboard housing
- Outboard housing

CAUTION *Do not scratch or gouge any surface.*

If seal debris is attached to the sides of the scroll walls, use a razor blade or Exacto knife to scrape this debris off.

2. Use dry compressed air to remove the tip seal debris from the scroll parts.

CAUTION *Do not blow compressed air or debris into exposed bearings.*

3. Wipe the scroll parts with isopropyl alcohol and a clean lint free cloth to remove any remaining tip seal debris.

TriScroll 600 Reassembly

1. Insert the new tip seal into the scroll tip grooves on the inboard housing side of the orbiting plate.
2. Cut the seal to the correct length at the end of each groove. Leave a gap of 1/4" (6 mm) from the outer end to allow for thermal growth.

3. Insert the new tip seal into the scroll tip grooves on the inboard housing.
4. Cut the seal to the correct length at the end of each groove. Leave a gap of 1/4" (6 mm) from the outer end to allow for thermal growth.

TriScroll 600 Reassembly (Continued)

5. Place the scroll in the vertical position and reinstall the inboard housing onto the crankshaft.

Placing the scroll in the vertical position keeps the tip seals from falling out of the grooves during reassembly.

6. Ensure that the scroll walls are properly aligned to allow full engagement of the two parts.

7. Reinstall the counterweight onto the crankshaft.
8. Align the keyways in the counterweight and crankshaft and install the key.
9. Secure the counterweight to the crankshaft using the M8x12 screw and washer.

Screw
and
washer
installed

TriScroll 600 Reassembly (Continued)

10. Install the rubber spider into motor shaft coupling.

Rubber spider installed

11. Align the motor coupling to properly mate with the fan hub coupling.
12. Install the inboard housing onto the frame.

TriScroll 600 Reassembly (Continued)

13. Secure the inboard housing assembly to the frame using the four M5x15 screws.

14. Insert the tip seal into the scroll tip grooves on the orbiting plate.
15. Cut the seal to the correct length at the end of each groove. Leave a gap of 1/8" (3mm) from the outer end to allow for thermal growth.

TriScroll 600 Reassembly (Continued)

16. Squeeze a dot of Krytox GPL 224 grease into each of the three needle bearings.
17. Smear grease over the needles.
18. Coat the lips of all three seals with grease.

19. Lightly grease the new 2-273 O-ring (large) and install it around the lip on the inboard housing.

TriScroll 600 Reassembly (Continued)

20. Insert the tip seals into the grooves on the outboard housing.
21. Cut the seal to the correct length at the end of each groove. Leave a gap of 1/8" (3mm) from the outer end to allow for thermal growth.

22. Install the outboard housing over the orbiting plate and against the inboard housing, engaging the dowel pins and all the sync cranks.

NOTE

Orient the sync cranks and the orbiting plate in the downward position before installing the outboard housing.

23. Secure the outboard housing to the inboard housing with the six M6x55 screws.

TriScroll 600 Reassembly (Continued)

24. Install the cowling over the pump module.
25. Secure with the three M5x16 screws.

TriScroll 600 Reassembly (Continued)

26. Lightly grease the new 2-127 O-ring and insert it into the groove on the intake fitting.
27. Place the intake fitting assembly into the outboard housing.

28. Secure the fitting with the two M5x16 screws.

TriScroll 600 Reassembly (Continued)

This figure illustrates a fully reassembled TriScroll 600 Series Pump.

Put the Pump Back into Service

The TriScroll 600 pump can be placed into service immediately after maintenance is complete. However, 24 hours of run time is required before base pressure of 7 mTorr can be achieved.

NOTE  *The 24 hour run time does not have to be continuous. If your application requires a low base pressure, it is wise to run the pump for the 24-hour period for optimum performance.*

Request for Return Health and Safety Certification

- Return authorization numbers (RA#) **will not** be issued for any product until this Certificate is completed and returned to a Varian, Inc. Customer Service Representative.
- Pack goods appropriately and drain all oil from rotary vane and diffusion pumps (for exchanges please use the packing material from the replacement unit), making sure shipment documentation and package label clearly shows assigned Return Authorization Number (RA#) VVT cannot accept any return without such reference.
- Return product(s) to the nearest location:
