# Series 150/160 and V-100 Valves

HIGH VACUUM BELLOWS SEALED VALVES

## Features and Benefits

- Choice of manual, pneumatic or electropneumatic actuation
- Angle and Inline body styles
- Available in port sizes from .75" to 6"
- Choice of ISO-KF, ISO-Universal, and CF flanges, and weld stubs
- Type 304 stainless steel body insures freedom from corrosion
- Formed bellows made of 321 stainless steel for a long life and resistance to particulate damage
- Installs in any position
- Cylinder pressure isolated from bellows, extending bellows life
- Visual indication of valve position
- Optional limit switches for remote indication of open and closed positions

## Applications

The HPS® Series 150/160 and V-100 valves are designed to insure product quality, reliability and value. They function reliably in applications ranging from semiconductor manufacturing to plasma physics research to nuclear accelerators. MKS manufactures its valves with interchangeable parts, inspecting them at every step.

## Description

Since bellows are a critical factor in valve reliability, HPS incorporates formed bellows into the 150/160 valves. The first major advantage of using formed bellows is consistency. Since formed bellows do not have welds joining each membrane, there is no stress concentration and fatigue failure from non-uniform welds. The second advantage is that the bellows convolutions never touch completely in the compressed position. Many vacuum processes, like chemical vapor or thin film deposition contain particulate contamination. If small particles fall between formed bellows, they have no effect. If similar particles fall between welded, nested bellows, they deform the membranes, cause stress concentration, and lead to early bellows failure.

An elastomer stem seal isolates the cylinder actuating pressure from the region within the bellows. The region within the bellows vents externally by grooves in the bonnet flange. If the stem seal fails, any air passing the seal would be vented harmlessly through these grooves. The vents also admit helium when leak checking the bellows.

The nosepiece O-ring must be firmly retained, especially in a valve that opens to a pressure differential. Vents in the O-ring groove eliminate the possibility of virtual leaks caused by air trapped in the corners of the groove.

A single acting cylinder opens the pneumatic valves up through the 3 inch size. When the cylinder is vented, a strong spring closes the valve. The spring within the bellows acts directly upon the nosepiece. Upon failure of the electric control voltage to the

solenoid coil or upon failure of the pneumatic supply, the valve fails closed. Valves in the 4 inch size are available either with (V-100 series) or without (150 series) a closing spring, and 6 inch valves are only available without a closing spring. Valves without a closing spring have double acting cylinders. In all sizes the pneumatic cylinder is lubricated adequately for the service life of the valve.

The V-100 is a 4 inch valve that is available in both manual and pneumatic options, and either angle or inline configurations. The pneumatic versions are available with a closing spring. Ordering codes are different than the 150/160 series, with more sealing options.

HPS vacuum valves may be installed in any position, with either the bellows or the nosepiece facing the pump. In systems with condensable materials, it is advantageous to install the valve with the nosepiece toward the chamber. The electropneumatic valve has a solenoid valve attached to the cylinder with a nipple. The cap screws fixing the cylinder to the body may be removed and the cylinder indexed at 90° increments for valves of sizes .75" to 1.5", and 60° increments for valves with port sizes 2" to 6". If necessary, the solenoid valve can be removed and located remotely.

Limit switches provide a signal to the control circuit or operator confirming that the valve is opened or closed. This option is often used in large vacuum installations with a microprocessor or computer controller. Limit switch components are available factory installed or as a kit that may be fitted to the valve by the user.

HPS Solenoid Valves are reliable, small, and consistent with needed conductance. Solenoid coils are available for use with a wide range of voltages and frequencies. The complete catalog number for an electropneumatic valve with a solenoid valve is the part number and the solenoid voltage and the frequency. For example, the number 153-1040K-24V/50-60 designates a 1.5" angle valve with NW 40 ISO-KF flanges, limit switches and solenoid valve with a coil rated for 24 volts and 50-60Hz frequency.

Many accessories can be attached through the pneumatic connection port. Another feature of the solenoid control valve is the threaded vent port that can accept an exhaust fitting. This is crucial in applications where it is not allowable to vent waste air into the room, for example in cleanrooms.

The Series 150, 160 and V-100 valves are primarily vacuum valves. Sometimes the valves encounter pressures above atmospheric in gas handling, or in backfilled systems. HPS valves may be used over the pressure range from 10<sup>-9</sup> Torr to 15 psig. The bellows design and closing force provide reliable operation to the maximum pressures stated.

For more information, call MKS Instruments, HPS Products at 1-800-345-1967, or 303-449-9861. Or visit our website at [www.mksinst.com](http://www.mksinst.com).

# Specifications

\* Double Acting Pneumatic

<sup>1</sup> Blow-by pressure is that pressure applied to the nosepiece port at which the nosepiece will not seal with the body port initially at vacuum.

\*\* See curve below

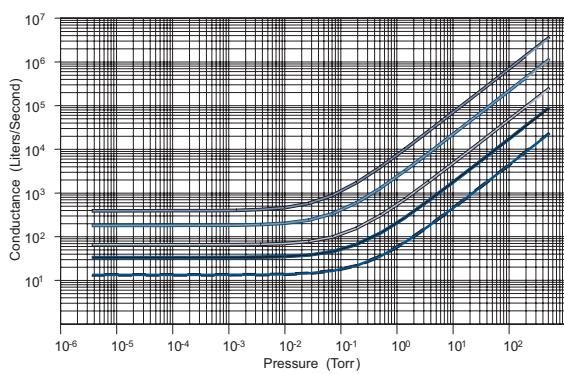

## Specifications 150/160 Valves

Pressure Range	15 psig to 1.0 x 10 <sup>-9</sup> Torr
Helium Leak Rate	1.0 x 10 <sup>-9</sup> std cc/sec
Maximum Bakeout Temp.	150°C - Body 70°C - Cylinder
Limit Switch Rating	5A - 250 VAC
Single Pole, Single Throw	5A - 30 VDC
Materials	
Body, Nosepiece and Bellows Termination	Type 304 Stainless Steel
Bellows	Type 321 Stainless Steel
Nosepiece and Bonnet Seals	Viton®
Pneumatics	Anodized aluminum alloys, Buna and plated steel
Pneumatic Connection	1/8" NPT-F (through 3") 1/4" NPT-F (4" and 6")

## Specifications V-100 Valves

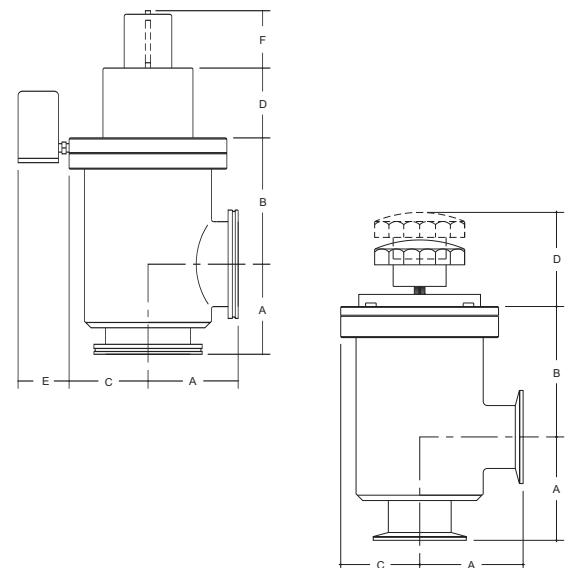

Conductance (see graph)	390 ltr/sec
Angle	360 ltr/sec
Inline	
Cylinder Air Pressure	50 psig (4.5 x 10 <sup>-5</sup> N/m <sup>2</sup> abs)
Minimum	100 psig (7.9 x 10 <sup>-5</sup> N/m <sup>2</sup> abs)
Maximum	
Cylinder Volume	1.6 x 10 <sup>-2</sup> ft <sup>3</sup> (4.6 x 10 <sup>-4</sup> m <sup>3</sup> )
Actuation Time in Seconds	Opening: 2 Closing: 2
Blow-by Pressure	32 psia (2.2 x 10 <sup>-5</sup> N/m <sup>2</sup> abs)
Maximum Internal Closing Pressure	30 psia (2.0 x 10 <sup>-5</sup> N/m <sup>2</sup> abs)
Pressure Range	15 psig to 10 <sup>-9</sup> Torr
Helium Leak Rate	1.0 x 10 <sup>-9</sup> std cc/sec
Maximum Bakeout Temperature	150°C
Limit Switch Rating	5A - 250 VAC
Single Pole, Single Throw	5A - 30 VDC
Materials	
Body, Nosepiece and Bellows Termination	Type 304 Stainless Steel
Bellows	Type 321 Stainless Steel
Nosepiece and Bonnet Seals	Choice - see table
Pneumatics	Anodized aluminum alloys, Buna and plated steel
Weight	
Angle	22 lbs. (10 kg)
Inline	27 lbs. (12.3 kg)
Pneumatic Connection	1/8" NPT-F

2.5" (63)	9.0 (4.1)	161-0063T		162-0063T		162-1063T		163-0063T		163-1063T	
3.0" (80)	16.0 (7.3)	161-0080T		162-0080T		162-1080T		163-0080T		163-1080T	

### Solenoid Voltage & Frequency

	24 VDC	24 VAC 50-60 Hz	208 VAC 50-60 Hz (Up to 3" only)	100-120 VAC 50 Hz 110-130 VAC 60 Hz	210-240 VAC 50 Hz 220-250 VAC 60 Hz
Part Number Extension	-24VDC	-24V/50-60	-208V/50-60	-120V/50-60	-220V/50-60

\* The complete part number for an electropneumatic valve with a solenoid valve is the part number listed above, plus the solenoid voltage and frequency extension. Sample part number: 163-0016K-24VDC.

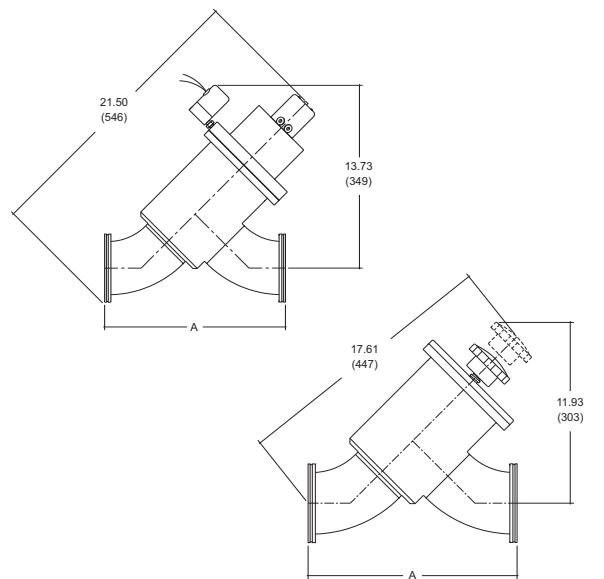

## V-100 Valve Ordering Information
